**Hexagon Metrology** is a global manufacturer of dimensional measuring products. Our industry-leading brands represent industry's largest selection and widest diversity of technologies. We service and support all our brands with a nationwide network of over 100 service engineers, who are here to provide you with prompt calibrations, repair, upgrades, software, parts and accessories.

**Brown & Sharpe**<sup>®</sup> offers a complete line of dimensional metrology products including automatic coordinate measuring machines, precision measuring systems, software, and aftermarket services.

**DEA**—experts in horizontal arm and gantry CMMs used for industrial dimensional inspection tasks at large scale. Turnkey measurement and inspection solutions are available for DEA products that operate in complex manufacturing environments.

**Leica Geosystems**<sup>®</sup> offers innovative 3D metrology systems which have the ability to measure large components and process data in CAD systems, Laser Tracker-based inspection systems, and industrial theodolites.

**Leitz**<sup>®</sup> specializes in ultra high precision coordinate measuring machines which measure a range of sizes from tiny wrist watch gears to a large ship's diesel engine. This organization also specializes in gear testing systems and measurement sensor technology.

**PC-DMIS**<sup>®</sup> is the world's leading measurement and inspection software. PC-DMIS has capability to serve customers on multiple metrology platforms, brands and hardware technologies through variations encompassing CMMs, vision machines, portable devices, and CNC machining.

**ROMER**<sup>®</sup> develops versatile 3D portable measuring arms featuring Wi-Fi connectivity, battery powered and quick change probes. ScanShark laser probes add non-contact inspection and measurement capabilities including reverse engineering.

**Sheffield Measurement**<sup>®</sup>, creator of Cordax<sup>®</sup> CMMs, used in many factory floor environments in markets worldwide. The small shop floor CMM originated at Sheffield which remains a world leader in coordinate measuring machines.

**TESA** Swiss-made precision hand tools sold in North America through distributors. Tools include CMM probing systems, height gages, calipers, dial indicators, micrometers, optical comparators, vision measuring systems, roundness testers, and entry-level CMMs.

**Don't forget about...**

**Universal Calibration Services** We offer the calibration and certification of most non-Hexagon CMMs. We also offer laser calibration of CNC machines, machining centers, lathes and horizontal boring mills. All calibrations are ISO/IEC 17025 accredited.

Current Promotion:

**RENISHAW**<sup>®</sup>  
apply innovation™

**15% off of new parts such as probes, controllers, and more!**

RBE parts, new machine orders, and retrofits are excluded from this offer. This discount is subject to change. The discounts advertised are U.S. domestic discounts and do not apply to international orders.

Call to see if there are any other **specials** available!
